## ADDENDUM

Public Building Commission of Chicago • Richard J. Daley Center • 50 West Washington, Room 200 • Chicago, Illinois 60602 • Tel: 312-744-3090 • Fax: 312-744-8005

ADDENDUM NO.:	001
PROJECT NAME:	CANTY ELEMENTARY SCHOOL ANNEX
PROJECT NO.:	05750
CONTRACT NO.:	C1568
DATE OF ISSUE:	May 28, 2015

#### NOTICE OF CHANGES, MODIFICATIONS, OR CLARIFICATIONS TO CONTRACT DOCUMENTS

The following changes, modifications, or clarifications are hereby incorporated and made an integral part of the Contract Documents. Unless clearly expressed otherwise by this Addendum, all terms and conditions defined in the original Contract Documents shall continue in full force and effect and shall have the same meaning in this Addendum.

- ITEM NO. 1: REVISIONS TO BOOK 1
  - 1. No change to Book 1.
- ITEM NO. 2: REVISIONS TO BOOK 2 1. No change to Book 2.
- ITEM NO. 3: REVISIONS TO BOOK 3, DIVISIONS 02 49 SPECIFICATION SECTIONS
  - 1. Specification Section 01 23 00 Alternates
    - a. Alternate Nos. 1 and 2 are to be included in the base bid scope of work. Remove specification section 01 23 00 in its entirety.
  - 2. Specification Section 07 52 00 Modified Bituminous Membrane Roofing
    - In Section 2.7, add G. Polyethylene-reinforced, self-adhering SBS vapor barrier Trilaminate woven polyethylene, non-slip, UV protected top surface, self-sealing, high-quality SBS rubber and asphalt blend with silicone release film. Basis of Design JM Vapor Barrier SA
    - b. In Section 3.5, add B. Install polyethylene-reinforced, self-adhering SBS vapor barrier in accordance with manufacturer's installation requirements, staggering end laps. Overlap the sides by a minimum of 3 inches (76 mm) and ends by a minimum of 6 inches (152 mm).
  - 3. Specification Section 12 24 13 Roller Window Shades
  - a. In Section 2.2, C, replace "Opaque, shadow proof." with "3-5% openness."
  - 4. Specification Section 23 09 20 Building Automation Systems (BAS)
    - a. In Section 1.4, A, add Automatic Building Control Inc as an acceptable company to install the web-based BAS system

Automatic Building Control, Inc. 1580 N. Northwest Highway Park Ridge, Illinois 60068 Contact: Mark Bevil 847.296.4000 Vendor # 22627

- b. In Section 3.10, G, add the following sequence for VAV box master-slave operations: "With respect to zones with multiple air terminal units and multiple space temperature sensors, the following shall occur to avoid opposing tempering modes:
  - i. A zone with two (2) space temperature sensors: the BAS system shall have residing logic to average the space temperatures and operate the associated air terminals in unison.
  - ii. A zone with three (3) space temperature sensors: the BAS system shall have residing logic where if two of three space temperatures are in the same mode and the third space sensor calls for the opposing mode, the majority demand becomes priority and the third zone shall be at its minimum ventilation position."
- c. Remove sub-section "3.25 Elevator Pump Monitoring".
- d. Remove sub-section "3.26 Domestic Hot Water Recirculation Pump Monitoring".
- e. Remove sub-section "3.27 Electrical Sub-Metering".
- f. In Section 3.8, E and 3.9, E, add "Revised/Updated the Return Fan Sequence for AHU-1 and AHU-2".
- 5. Specification Section 23 05 93 Testing, Adjusting, and Balancing for HVAC
  - a. In Section 3.6, C, add "Reference Section 23 09 26 for setpoints, limits, or fan curve parameters to achieve design operations."
- 6. Specification Section 23 64 23 Scroll Water Chillers was added.
- 7. Remove specification section 23 64 26 Rotary-Screw Water Chillers in its entirety.

## ITEM NO. 4: REVISIONS TO CIVIL DRAWING SHEETS

- 1. Sheet C4.0 Site Utility Plan
  - a. Addition of size of the proposed electrical ductbank, 21" x 13", in the utility crossing table.
  - b. Revision of location of the proposed electrical ductbank in relation to the proposed storm system in the utility crossing table. Proposed electrical ductbank is to pass under the proposed storm system with 12" of clearance.

## ITEM NO. 5: REVISIONS TO GENERAL AND ARCHITECTURAL DRAWING SHEETS

- 1. Sheet G-010 General Notes
  - a. Add Alternate Nos.1 and 2 are to be included in the base bid scope of work.
- 2. Sheet A-111 Annex Second Floor Plan
- a. Partition type between Classroom No.252 and Mechanical Room No.250 revised to 1E.
- 3. Sheet A-440 Roof Details
  - a. Detail H6 removed.
  - b. Detail H8 revised to coordinate with specifications.
  - c. All references to single-ply roofing system to be deleted.
- 4. Sheet A-451 Exterior Details
  - a. Detail H10 removed.
- 5. Sheet A-500 Door Schedule Types and Details
  - a. Door schedule updated to coordinate with exterior elevations.
  - b. Detail H10 door elevations updated to coordinate with exterior elevations and door schedule.
- 6. Sheet A-510 Partition Types and Window Schedule
  - a. Detail C1 Partition, add note "ASSEMBLY E 2 LAYERS OF GWB ON SEPARATE ROWS OF INDEPENDENT METAL STUDS SEPARATED BY 1" MIN GAP ERECTED FULL HEIGHT TO STRUCTURAL SLAB ABOVE AND BELOW. FULL DEPTH ACOUSTICAL BATT INSULATION IN BOTH STUD CAVITIES. NO PENETRATIONS ALLOWED."
- 7. Sheet A-700 Room Finish Schedule Legend and Details

- a. Revise Finish Legend, window coverings WC-1 from opaque vinyl coated shade to 3-5% openness vinyl coated shade.
- 8. Sheet A-710 First Floor Furniture Plan and Sheet A-711 Second Floor Furniture Plan
  - a. Remove "FOR REFERENCE ONLY" note on drawing sheet.

#### ITEM NO. 6: REVISIONS TO STRUCTURAL DRAWING SHEETS

- 1. Sheet S-102 Annex Second Floor Framing Plan
  - a. Missing section marks provided.
  - b. Penetrations for risers to coordinate with MEP drawings indicated.
- 2. Sheet S-103 Roof Framing Plan
  - a. Missing section marks provided.
  - b. Top of steel elevations provided. WT4x9s added at mechanical penthouse
- 3. Sheet S-401 Framing Details
  - a. Details 15 and 19: WT removed, WF moved up 2 1/2".

#### ITEM NO. 7: REVISIONS TO MEP AND FP DRAWING SHEETS

- 1. Sheet P.000 Plumbing Symbols, Notes & Abbreviations
  - a. Changed insulation on CW to be 1"
  - b. Removed drain tile pipe from pipe materials
- 2. Sheet P.200a Underground Area A Partial Plumbing Plan
  - a. Changed the combined fire/domestic water service to -5"-6" invert elevation
  - b. Added reference note at existing building assembly hall stage for clarification "SEE P.100b FOR WORK IN THIS AREA"
- 3. Sheet P.500 Plumbing Schedules
  - a. Removed "detector" from valve type for clarification.
  - b. Modify valve description to match model selection for clarification.
  - c. Changed model number to be 0.125 gpf to meet LEED Credits.
  - d. Added note to install EVB at 7'6" A.F.F.
  - e. Changed Cleanout model.
  - f. Floor sink rim to be installed 1" A.F.F.
  - g. Revised SK-1 count.
  - h. Removed SK-2.
- 4. Sheet P.600 Plumbing Details
  - a. Detail 8 Water Heater Diagram, add air intake, flues and gas supply to the water heater detail and reference to mechanical drawings.
- 5. Sheet FP.000 Fire Protection Symbols, Notes, Abbreviations, and Schedules
  - a. Fire Department Connection and Fire Pump Test Connection Schedule, add "STORZ CONNECTION" for clarification of FDC type.
  - b. Detail 1 Fire Protection Riser Diagram, add check valve to bypass assembly.
- 6. Sheet FP.600 Fire Protection Details
  - a. Added check valve to bypass assembly.
  - b. Added ball drip pipe to drain under FDC.
- 7. Sheet E.400 Electrical Riser Diagrams
  - a. Detail 1 Electrical One Line Diagram, revise AHU-1 circuit breaker to 35A-3P.
  - b. Detail 1 Electrical One Line Diagram, revise AHU-2 circuit breakers to 100A-3P.
- 8. Sheet E.500 Electrical Schedules Powered Equipment
- a. Revised circuiting requirements for AHU-1, AHU-2, and KEF-1.
- 9. Sheet E.510 Electrical Schedules Panel Schedules
  - a. Revised AHU-1 and AHU-2 circuit breakers to 35A-3P and 100A-3P, respectively at MSB switchboard schedule

- b. Revised circuiting of KEF-1 at panel MP-1.
- 10. Sheet M.000 Mechanical Symbols, Notes & Abbreviations
  - a. Added note 26 to General Notes, "VOLUME DAMPERS OF LOCKING TYPE SHALL BE PLACED IN EACH BRANCH OF LOW PRESSURE DUCTWORK. REGISTERS SHALL NOT BE USED FOR BALANCING."
  - b. Removed note 5 from City of Chicago Notes
- 11. Sheet M.201a First Floor Area A Partial Mechanical Ductwork Plan
  - a. Revised transfer air ductwork for Storage 150G.
  - b. Revised exhaust ductwork and outside air ductwork and grille sizes for electrical room 158
  - c. Note for linear slot diffusers in lunch room revised
  - d. Horizontal fire damper has been added at the floor slab for both- SA and RA ductwork
  - e. Transfer air ductwork between lunchroom and server has been removed
  - f. Kitchen exhaust hood has been revised to be 2500 CFM, and ductwork sizing has been updated for revised airflow.
- 12. Sheet M.202a Second Floor Area A Partial Mechanical Ductwork Plan
  - a. Ductwork For VAV2-12B Revised
  - b. Ductwork to KEF-1 has been revised for updated airflow
  - c. Ductwork to EF-3 has been revised for updated airflow
  - d. Ductwork to EF-2 and from L-1 has been revised
- 13. Sheet M.203a Roof Area A Partial Mechanical Ductwork Plan
  - a. Added keynote 1 "PROVIDE MINIMUM 12" DUCT EXTENSON BETWEEN OUTSIDE AIR INTAKE DAMPER AND INTAKE HOOD FOR ISTALLATION OF AIR FLOW 1 MEASURING STATION"
- 14. Sheet M.211a First Floor Area A Partial Mechanical Piping Plan
  - a. Removed note for heat tracing at chiller enclosure.
  - b. Added temperature sensors for radiant panels in Boys Toilet Room 145B
  - c. Added temperature sensors for radiant panels in Girls Toilet Room 145A
  - d. Added temperature sensors for radiant panels in Toilet Room 144.
  - e. Added emergency switch for kitchen gas equipment in Hybrid Kitchen 150.
  - f. Added emergency switch for water heaters in Mechanical Room 156
- 15. Sheet M.212a Second Floor Area A Partial Mechanical Piping Plan
  - a. Added temperature sensors for radiant panels in Boys Toilet Room 245B
  - b. Added temperature sensors for radiant panels in Girls Toilet Room 245A
  - c. Added temperature sensors for radiant panels in Toilet Room 244.
  - d. Added emergency switch in Mechanical Room 250.
- 16. Sheet M.300 Enlarged Mechanical Plans- Existing
  - a. Revised detail 4 for ductwork and diffuser size for EF-4
- 17. Sheet M.301 Enlarged Mechanical Plans- Annex
  - a. Added emergency switch to Mechanical Room 250
  - b. Moved the VFD for P-3
  - c. Moved the VFD for P-4
- 18. Sheet M.400 Mechanical System Diagrams Waterside
- a. Revised valves on gas riser diagram
- 19. Sheet M.500 Mechanical Schedules
  - a. Revised EF-2,3,4 on Fan schedule
  - b. Revised AHU schedule
  - c. Revised AHU filter data
  - d. Revised sound data for AHU-1,2
  - e. Revised Gas Booster Pump to be duplex pump
  - f. Chiller schedule updated for scroll chiller

- g. Boiler schedule has been updated
- h. Louver schedule has been updated
- 20. Sheet M.501 Mechanical Schedules
  - a. Diffusers, Registers, and Grilles Schedule, add diffuser length of 48" for type B Titus Flowbar FL-20.
  - b. Diffusers, Registers, and Grilles Schedule, add diffuser length of 48" for type J Titus Flowbar FL-25.
- 21. Sheet M.600 Mechanical Details
  - a. Detail 2 Typical Duct Thru Floor with Damper Detail (For New Buildings), add access door for reseting of damper or inspection, minimum 12" x 12".
  - b. Detail 8 Terminal Unit, add access door integral to box, and add note "PROVIDE (4) POINTS OF SUPPORTS FROM BUILDING STRUCTURE. LENGTH SUPPORTS TO SUIT SPACE AVAILABLE."
- 22. Sheet M.602 Mechanical Details
  - a. Revised detail 8
  - b. Removed detail 10
- 23. Sheet M.603 Mechanical Details
  - a. Detail 7 has been updated to remove EOR note
  - b. Detail 12 has been removed
  - c. Detail 9 has been revised
  - d. Detail 11 has been revised
  - e. Detail 13 has been revised
- 24. Sheet M.604 Mechanical Details
  - a. Detail 2 Chiller Noise Reduction System, revised to refer to architectural drawings for masonry wall construction.
  - b. Detail 4 Air Handling Unit Details (AHU-2) revised to remove MERV-11 filter and to show pipe chase.
  - c. Detail 5 Air Handling Unit Details (AHU-1) revised to remove MERV-11 filter and to show pipe chase.
- 25. Sheet M.703 AHU-1 Controls Diagram
  - a. Add note for "RA Isolation Damper": Multiple damper sections shall be controlled in unison.
- 26. Sheet M.707 Control Detail-1
  - a. Remove Detail and Points List: BAS Monitoring of Electrical Sub-Metering.
  - b. Remove Detail and Points List: BAS Monitoring of DHW Recirculation Pump.
  - c. Remove Detail and Points List: BAS Monitoring of Elevator Pit Pump.
- 27. Sheet M.708 Control Detail-2
  - a. Remove Detail: Outside Air Sensing.

#### ITEM NO. 8: REVISIONS TO FOOD SERVICE DRAWING SHEETS

1. Remove "FOR REFERENCE ONLY" note on sheet nos. FS101, FS201, FS202, FS301, FS302, FS401, FS402, FS701, and FS801.

#### ITEM NO. 9: REQUESTS FOR INFORMATION

1. **Statement:** Please Drawings E0.10 and C4.0 - there is a conflict between the two drawings with regard to the underground electric ducts. E0.10 show underground ducts going to pole in alley that's 200 plus feet from the property line, that requires opening up street, sidewalks, and alley (restoration work not indicated). Sheet C4.0 says this is utility work and not in contract. Please confirm that this work is N.I.C. as stated on sheet C4.0.

**Response:** As indicated on sheet C4.0, the underground ducts from the pole in the alley to the property line of the project site is part of the utility work and is N.I.C.

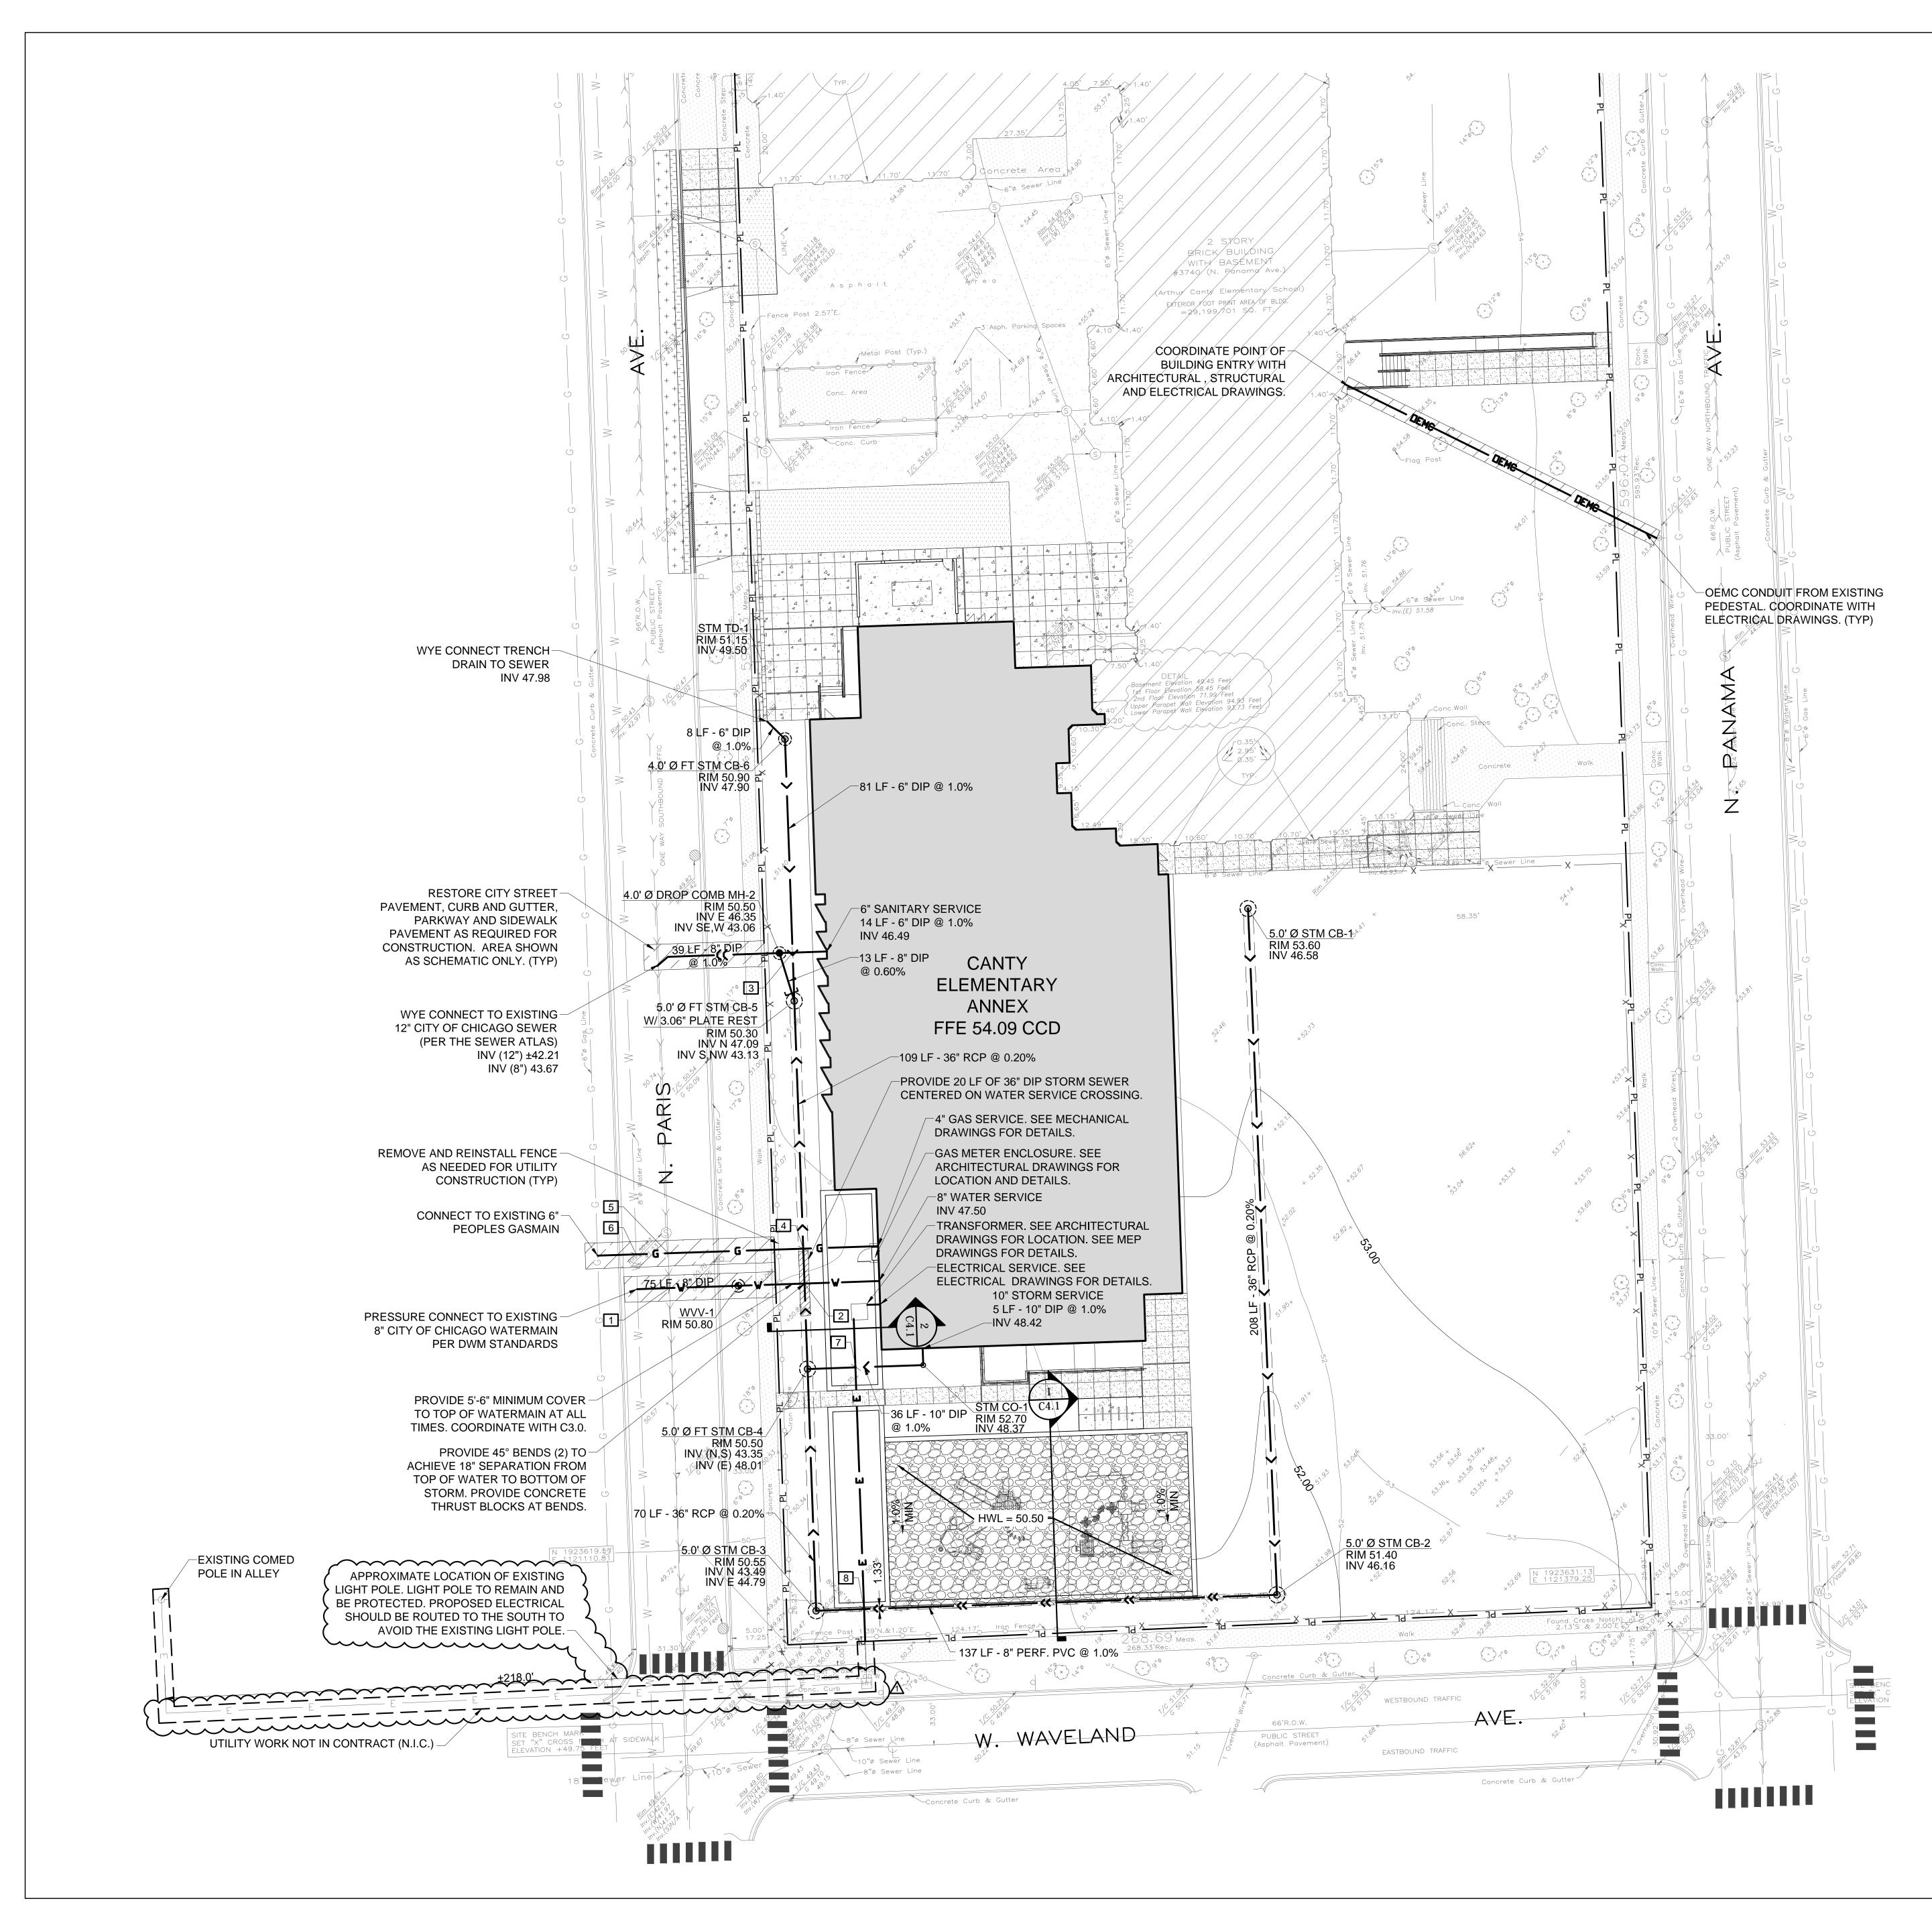

2. **Statement:** Please provide the critical fall height for the playlot surfaces. **Response:** Critical fall height for the playlot surface to comply with ASTM F1292 as indicated in the project manual.

#### List of Attachments and Drawings:

(Available at Springer Blueprint Service's online plan room: http://www.springerblueprint.com/public.php.)

- 1. This Addendum includes the following attached Sheets:
  - a. Civil Sheet C4.0 dated 05.26.2015
  - b. Architectural Sheet A440 and A500 dated 05.26.2015
  - c. Structural Sheets S102, S103 and S401 dated 05.26.2015
  - d. Mechanical Sheets M.201a, M202a, M.300, M.400, M.500, M.602, M.603, and M.703A dated 05.26.2015
  - e. Electrical Sheets E.500 and E.510 dated 05.26.2015
  - f. Plumbing Sheet P.500 dated 05.26.2015
  - g. Fire Protection Sheets FP.600 dated 05.26.2015

NO	TES:
1.	CONTROL DRAWINGS DO NOT INCLUDE ALL HYDRONIC PIPING DEVICES, REFER TO
	SYSTEM SCHEMATICS FOR COMPLETE PIPING LAYOUT.

- 2. REMOTE DIFFERENTIAL PRESSURE SENSOR IS TO BE LOCATED 2/3 DOWN THE MOST SIGNIFICANT DUCT RUN.
- 3. PROVIDE ADEQUATE LOW LIMIT SENSING LENGTH AS SHOWN IN THE DETAIL PAGE. 4. PROVIDE ADEQUATE DAMPER ACTUATORS FOR PROPER TORQUE-TO-SQUAREFEET OPERATION.
- 5. TCC SHALL PROPERLY COORDINATE VALVE FITMENT AND INSTALLATIONS WITH OTHER TRADES.
- 6. TCC SHALL PROPERLY COORDINATE DAMPER FITMENT AND INSTALLATIONS WITH OTHER TRADES.
- 7. TCC SHALL PROPERLY COORDINATE AFMS FITMENT AND INSTALLATION WITH OTHER TRADES.
- 8. TCC SHALL WORK CLOSELY WITH BALANCING CONTRACTOR TO MEET FACILITY REQUIREMENTS, PRIOR TO SUBSTANTIAL COMPLETION.
- 9. TCC SHALL WORK CLOSELY WITH VFD START-UP PERSONNEL TO MEET FACILITY REQUIREMENTS, PRIOR TO SUBSTANTIAL COMPLETION.
- 10. ALL CONTROL CONDUIT AND WIRE SHALL NOT BE INSTALLED SUCH THAT MECHANICAL MAINTENANCE ARE PROHIBITING OR LIMITED.

NOTES

- STEP 1 CONFIRM FINAL LOCATION OF EQUIP WITH THE MECH DRWGS & OEM'S SHOPS PRIOR TO INSTALLING CONDUIT. SEE PWR DRWGS FOR EQUIP TAG LOCATIONS

21	POTSINK	1	3/4"	3/4"	-	FS	PROVIDE WITH TWO ROUGH-INS FOR TWO FAUCETS

NOTES:

1. THE ABOVE SCHEDULE REPRESENTS FOOD SERVICE EQUIPMENT & FIXTURES THAT REQUIRE PLUMBING SUPPORT. REFER TO THE FOOD SERVICE/KITCHEN CONSULTANT'S DRAWINGS FOR ROUGH-IN REQUIREMENTS & EXACT LOCATIONS OF ALL FOOD SERVICE FIXTURES & EQUIPMENT.

. PLUMBING CONTRACTOR SHALL PROVIDE AND ROUTE INDIRECT WASTE PIPING FROM KITCHEN FIXTURES & EQUIPMENT TO ADJACENT FLOOR SINK(S) AS REQUIRED, & SPILL OVER FLOOR SINK(S) WITH CODE APPROVED AIR GAP(S). NO DIRECT SANITARY CONNECTION OF THIS TYPE OF EQUIPMENT IS ALLOWED. CONTRACTOR SHALL ALSO PROVIDE A MINIMUM OF 1" THICK INSULATION (WITH APPROVED SANITARY BARRIER WRAP) FOR CONDENSATE AND/OR REFRIGERATED WASTE PIPING DISCHARGING INTO FLOOR SINKS TO PREVENT

SWEATING (I.E. ALL PIPING CONVEYING DRAINAGE LOWER THAN 60°F). SEE FOOD SERVICE/KITCHEN CONSULTANT'S DRAWINGS FOR ADDITIONAL REQUIREMENTS. 3. PROVIDE EMERGENCY DRAIN PAN ASSEMBLY DIRECTLY UNDERNEATH ALL DRAINAGE PIPING LOCATED ABOVE FOOD SERVICE AREAS. PROVIDE MINIMUM 1" COPPER DRAIN PIPE CONNECTION AT DRAIN PAN LOW POINTS, & ROUTE TO NEAREST FLOOR SINK WITH APPROVED AIR GAP.

4. SEE FOOD SERVICE PLANS FOR ROUGH-IN ELEVATIONS

			SPEC	CIALTY FIXTURES
SYMBOL	TYPE	MFR	MODEL NO	NOTES/OPTIONS
DCDA-1	DOUBLE CHECK DETECTOR ASSEMBLY BACKFLOW PREVENTER	WATTS	SERIES 774DCDA	STAINLESS STEEL, ASSE 1048 RATED. UL LISTED, FM APPROVED. FIRE PROTECTION SERVICE. 6" SIZE, TESTABLE UNIT. FURNISHED BY FIRE PROTECTION CONTRACTOR. INSTALLED BY PLUMBING CONTRACTOR.
DCVA-1	DOUBLE CHECK VALVE ASSEMBLY BACKFLOW PREVENTER	WATTS	SERIES 007	BRONZE, ASSE 1015 RATED. 2" SIZE, TESTABLE UNIT. PROVIDE WITH STRAINER & ACCESS PANEL/COVER AS REQUIRED. INSTALL AT MAXIMUM 5'-0" AFF.
DCV-1	DUAL CHECK VALVE ASSEMBLY	WATTS	SERIES 7	ASSE 1024 RATED. 3/4" SIZE. BRONZE BODY CONSTRUCTION. PROVIDE WITH STRAINER.
<u>TMV-1</u>	MASTER TEMPERATURE MIXING VALVE ASSEMBLY	POWERS	LFSH1432	ASSE 1017 RATED. HI/LO TYPE SINGLE MIXING VALVE UNIT. 10 GPM FLOW RATE AT 5 PSI PRESSURE DROP. 3/4" INLETS & 1" OUTLET CONNECTIONS. INSTALL ON FIELD FABRICATED CHANNEL SUPPORT ASSEMBLY WITH RECIRC PUMP, ADJACENT TO WATER HEATERS.
<u>TMV-2</u>	TEMPERATURE MIXING VALVE ASSEMBLY	WATTS	LFUSG-B-M2	ASSE 1016/1070 RATED. POINT-OF-USE TEMPERING VALVE. 3/8" INLETS & OUTLET. 0.5 GPM AT 1 PSI PRESSURE DROP. 1.5 PSIG MINIMUM OPERATING PRESSURE, 70 PSIG MAXIMUM. INSTALL AT FIXTURE WITH LOCKING ADJUSTMENT KNOB. PROVIDE CHECK VALVES AT H&CW SUPPLY INLETS. LEAD FREE BRASS BODY CONSTRUCTION. OUTLET TEMPERATURE: 105°F
<u>TMV-3</u>	TEMPERATURE MIXING VALVE ASSEMBLY	GUARDIAN	G3600	ANSI Z358.1-2009 RATED. POINT-OF-USE TEMPERING VALVE. 1/2" INLETS & OUTLET. INSTALL AT ALL EYE/FACE WASH STATIONS. PROVIDE CHECK VALVES AT H&CW SUPPLY INLETS. LEAD FREE BRASS BODY CONSTRUCTION. OUTLET TEMPERATURE: 80°F
<u>ET-1</u>	THERMAL EXPANSION TANK	WATTS	DELTA 30	THERMAL EXPANSION TANK WITH INTERNAL BUTYL DIAPHRAGM. ASME RATED. 15 GALLON TANK VOLUME. 10 GALLON ACCEPTANCE VOLUME. FDA APPROVED FOR POTABLE WATER. PROVIDE FOR EACH WATER HEATER.
<u>ET-2</u>	THERMAL EXPANSION TANK	WATTS	DELTA 30	THERMAL EXPANSION TANK WITH INTERNAL BUTYL DIAPHRAGM. ASME RATED. 15 GALLON TANK VOLUME. 10 GALLON ACCEPTANCE VOLUME. FDA APPROVED FOR POTABLE WATER. PROVIDE FOR EACH WATER HEATER.
NFWH-1	NON-FREEZE WALL HYDRANT	WOODFORD	B65	CHROME FREEZELESS WALL HYDRANT ASSEMBLY WITH SQUARE WALL BOX & DOOR, INTEGRAL VACUUM BREAKER & LOOSE KEY HANDLE. PROVIDE STAINLESS STEEL ACCESS PANEL AS REQUIRED FOR SERVICING.
<u>HB-1</u>	INTERIOR WASHDOWN HOSE BIBB	CHICAGO FAUCET	965	WALL MOUNTED SILL COCK, LOOSE KEY, SOLID CHROME PLATED- SOLID BRASS CONSTRUCTION, INSTALL ELEVATED VACUUM BREAKER. 7'-6" A.F.F.
<u>GI-1</u>	GREASE INTERCEPTOR	ZURN MANUFACTURER	Z1170	INSTALL PER MANUFACTURER'S SPECIFICATIONS.
<u>SI-1</u>	SOLIDS INTERCEPTOR	JAY R SMITH	8714-SS	REMOVABLE STAINLESS STEEL PERFORATED DEBRIS BASKET. 1-1/2" PLAIN END OUTLET AN INLET CONNECTIONS. INSTALL PER MANUFACTURER'S RECOMMENDATIONS FOR MAINTENANCE PURPOSES. STAINLESS STEEL BODY. COORDINATE LOCATION WITH ADA REQUIREMENTS.

NOTE: MANUFACTURERS AND MODEL NUMBERS LISTED, INDICATE THE BASIS OF DESIGN. OTHER MANUFACTURERS AND PRODUCTS ARE ACCEPTABLE IF LISTED IN THE SPECIFICATIONS, AND THE ENGINEER OF RECORD DETERMINES THEM TO BE EQUIVALENT TO THE SPECIFIC PRODUCTS LISTED WITHIN THE SCHEDULES. REFER TO SPECIFICATIONS FOR LIST OF MANUFACTURERS FOR EACH PRODUCT.

5 FIRST FLOOR AREA A - ENLARGE FIRE PROTECTION PLAN NTS

#### SECTION 23 64 23

#### SCROLL WATER CHILLERS

#### PART 1 - GENERAL

#### 1.1 SUMMARY

A. Section includes packaged, air-cooled, electric-motor-driven, scroll water chillers for capacities up to 150 tons.

#### 1.2 DEFINITIONS

A. IPLV: Integrated part-load value. A single number part-load efficiency figure of merit calculated per the method defined by ARI 550/590 and referenced to ARI standard rating conditions.

#### 1.3 SUBMITTALS

- A. Product Data: Include refrigerant, rated capacities, operating characteristics, furnished specialties, and accessories.
  - 1. Performance at ARI standard conditions and at conditions scheduled (provide COP/EER/KW per Ton and IPLV for water, COP/EER/KW per Ton and NPLV for 30% PG conditions).
  - 2. Partload Performance at ARI standard unloading conditions scheduled (provide COP/EER/KW per Ton and IPLV for water and COP/EER/KW per Ton and NPLV for 30% PG conditions).
  - 3. Minimum evaporator flow rate & maximum rate of change.
  - 4. Refrigerant type and capacity of water chiller.
  - 5. Oil capacity of water chiller.
  - 6. Fluid capacity of evaporator.
  - 7. Fluid capacity of condenser.
  - 8. Characteristics of safety relief valves.
  - 9. Minimum entering condenser-air temperature
  - 10. Sound data.
  - 11. If manufacturer requires control of external devices provide a description of the control required and the proposed method of control including hardware.
  - 12. Standard training video for owner and commissioning authority review if it is to be used as an alternate to video taping of training.
- B. LEED Submittals:
  - 1. Prerequisite EA2: Provide certification that the minimum efficiency is equal to the requirements of ASHRAE 90.1-latest edition. Include performance at ARI standard conditions, unloading conditions and at conditions scheduled (provide COP/EER/KW per Ton and IPLV for water, COP/EER/KW per Ton and NPLV for 30% PG conditions).
  - 2. Credit EA1: Provide certification that the minimum efficiency betters the requirements of ASHRAE 90.1-latest edition as scheduled. Include performance at ARI standard

conditions, unloading conditions and at conditions scheduled (provide COP/EER/KW per Ton and IPLV for water, COP/EER/KW per Ton and NPLV for 30% PG conditions).

- 3. Credit EA4: Certification that refrigerants are free of HCFCs.
- 4. Credit EA5: Certification that the equipment provided is equipped to provide continuous monitoring of energy consumption over time to the BAS.
- C. Shop Drawings: Complete set of manufacturer's prints of water chiller assemblies, control panels, sections and elevations, and unit isolation. Include the following:
  - 1. Assembled unit dimensions.
  - 2. Weight and load distribution.
  - 3. Required clearances for maintenance and operation.
  - 4. Size and location of piping and wiring connections.
  - 5. Wiring Diagrams: Power, signal, and control wiring. Single line schematic drawing of all power field hookup requirements, indicating all items that are furnished.
  - 6. Schematic diagram of control system indicating points for field connection. Diagram shall fully delineate field and factory wiring.
- D. Coordination Drawings: Floor plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
  - 1. Piping roughing-in requirements.
  - 2. Wiring roughing-in requirements, including spaces reserved for electrical equipment.
  - 3. Access requirements, including working clearances for mechanical controls and electrical equipment, and tube pull and service clearances.
- E. Certificates: For certification required in "Quality Assurance" Article.
- F. Source quality-control test reports.
- G. Startup service reports. Submit written reports documenting the activities required by 3.2 Chiller Installation, 3.3 Connections, and 3.5 Contractor Start-Up and Reporting. These reports are to be submitted two weeks after the startup is completed.
- H. Operation and Maintenance Data: For each water chiller to include in emergency, operation, and maintenance manuals.
- I. Warranty: Sample of special warranty.
- J. Training Reports: Submit training reports documenting dates and attendance.
- 1.4 QUALITY ASSURANCE
  - A. ARI Certification: Certify water chiller performance according to requirements in ARI 550/590, "Water Chilling Packages Using the Vapor Compression Cycle."
  - B. ASHRAE Compliance:
    - 1. ASHRAE 15 for safety code for mechanical refrigeration.
    - 2. ASHRAE Guideline 3 for refrigerant leaks, recovery, and handling and storage requirements.

- 3. ASHRAE/IESNA 90.1 for energy efficiency.
- C. ASME Compliance: Fabricate and stamp water chiller heat exchangers to comply with ASME Boiler and Pressure Vessel Code.
- D. Comply with NFPA 70.
- 1.5 DELIVERY, STORAGE, AND HANDLING
  - A. Ship water chillers from the factory fully charged with refrigerant and filled with oil.

#### 1.6 COORDINATION

- A. For a chiller mounted on a concrete base, coordinate sizes and locations of concrete bases with actual equipment provided.
- B. For chillers mounted on structural steel, coordinate sizes, locations, and anchoring attachments of structural-steel support structures.
- C. For roof mounted chillers, coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.
- D. If the manufacturer requires devices other than the chiller to be controlled as part of the operation of the chiller the manufacturer will be responsible for providing all required controls and for the installation of the controls. The proposed controls must comply with the requirements of the Division 23 Section "Building Automation System (BAS)" and provide all the functions required by the BAS. These controls must be coordinated and submitted with the BAS control submittal.

#### 1.7 WARRANTY

- A. Written manufacturer warranty covering parts and labor for a period of one year from equipment start-up or eighteen months from shipment whichever is greater.
- B. Extended Compressor and Motor Warranty: Written manufacturer's warranty covering parts and labor for compressor or motor failures within a period of 5 years from equipment start-up.

#### PART 2 - PRODUCTS

#### 2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide products by one of the following
  - 1. Carrier; a United Technologies Company.
  - 2. McQuay International.
  - 3. Trane Company
  - 4. York; a Johnson Controls Company.

#### 2.2 PACKAGED AIR-COOLED WATER CHILLERS

- A. Description: Factory-assembled and run-tested water chiller complete with base and frame, condenser casing, compressors, compressor motors and motor controllers, evaporator, condenser coils, condenser fans and motors, electrical power, controls, and accessories.
- B. Cabinet:
  - 1. Base: Galvanized-steel base extending the perimeter of water chiller. Secure frame, compressors, and evaporator to base to provide a single-piece unit.
  - 2. Frame: Rigid galvanized-steel frame secured to base and designed to support cabinet, condenser, control panel, and other chiller components not directly supported from base.
  - 3. Casing: Galvanized steel.
  - 4. Finish: Coat base, frame, and casing with a corrosion-resistant coating capable of withstanding a 500 hour salt-spray test according to ASTM B 117.
  - 5. Sound-reduction package consisting of the following:
    - a. Acoustic enclosure around compressors.
    - b. Reduced-speed fans with acoustic treatment.
    - c. Designed to reduce sound level without affecting performance.
- C. Compressors:
  - 1. Description: Positive-displacement direct drive with hermetically sealed casing.
  - 2. Each compressor provided with suction and discharge service valves, crankcase oil heater, and suction strainer.
  - 3. Operating Speed: Nominal 3600 rpm for 60-Hz applications.
  - 4. Capacity Control: On-off compressor cycling,
  - 5. Oil Lubrication System: Automatic pump with strainer, sight glass, filling connection, filter with magnetic plug, and initial oil charge.
  - 6. Vibration Isolation: Mount individual compressors on vibration isolators.
- D. Compressor Motors:
  - 1. Hermetically sealed and cooled by refrigerant suction gas.
  - 2. High-torque, two-pole induction type with inherent thermal-overload protection on each phase.
- E. Compressor Motor Controllers:
  - 1. Across the Line: NEMA ICS 2, Class A, full voltage, nonreversing.
- F. Refrigeration:
  - 1. Refrigerant: R-410a. 407c is only acceptable if 410a is not available.
  - 2. Refrigerant Compatibility: Parts exposed to refrigerants shall be fully compatible with refrigerants, and pressure components shall be rated for refrigerant pressures.
  - 3. Refrigerant Circuit: Each circuit shall include a thermal-expansion valve, refrigerant charging connections, a hot-gas muffler, compressor suction and discharge shutoff valves, a liquid-line shutoff valve, a replaceable-core filter-dryer, a sight glass with moisture indicator, a liquid-line solenoid valve, and an insulated suction line.

- G. Evaporator:
  - 1. Brazed-plate or shell-and-tube design, as indicated.
  - 2. Shell and Tube:
    - a. Description: Direct-expansion, shell-and-tube design with fluid flowing through the shell and refrigerant flowing through the tubes within the shell.
    - b. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
    - c. Shell Material: Carbon steel.
    - d. Shell Heads: Removable carbon-steel heads with multipass baffles designed to ensure positive oil return and located at each end of the tube bundle.
    - e. Shell Nozzles: Fluid nozzles located along the side of the shell and terminated with mechanical-coupling end connections for connection to field piping.
    - f. Tube Construction: Individually replaceable copper tubes with enhanced fin design, expanded into tube sheets.
    - g. Tested and stamped according to ASME Boiler and Pressure Vessel Code
    - h. The water-side working pressure shall be a minimum of 150 psig
    - i. The refrigerant-side working pressure shall be a minimum of 350 psig for R-407c refrigerant or 445 psig for R-410a refrigerant.
  - 3. Brazed Plate:
    - a. Direct-expansion, single or two pass, brazed-plate design.
    - b. Type 316 stainless-steel construction.
    - c. Code Compliance: Tested and stamped according to ASME Boiler and Pressure Vessel Code.
    - d. Fluid Nozzles: Terminate with mechanical-coupling end connections for connection to field piping.
    - e. The water-side working pressure shall be a minimum of 300 psig
    - f. The refrigerant-side working pressure shall be a minimum of 300 psig
  - 4. Heater: Factory-installed and -wired electric heater with integral controls designed to protect the evaporator to minus 20 deg F in the off-cycle.
- H. Air-Cooled Condenser:
  - 1. Plate-fin coil with integral sub cooling on each circuit
    - a. Construct coils of seamless copper tubes mechanically bonded to aluminum alloy fins with full drawn collars.
    - b. Design working pressure shall be 450 psig for R-407c refrigerant or 656 psig for R-410a refrigerant.
    - c. Hail Protection: Provide condenser coils with louvers, baffles, or hoods to protect against hail damage.
  - 2. Fans: Direct-drive propeller type with statically and dynamically balanced fan blades, arranged for vertical air discharge.
  - 3. Fan Motors: Totally enclosed nonventilating (TENV) or totally enclosed air over (TEAO) enclosure, with permanently lubricated bearings, and having built-in over current- and thermal-overload protection.

- 4. Fan Guards: Steel safety guards with corrosion-resistant coating.
- **Electrical Power:** I.
  - Factory-installed and -wired switches, motor controllers, transformers, and other 1 electrical devices necessary shall provide a single-point field power connection to water chiller.
  - 2. House in a unit-mounted, Type 3R enclosure with hinged access door with lock and key or padlock and key.
  - 3. Wiring shall be numbered and color-coded to match wiring diagram.
  - 4. Install factory wiring outside of an enclosure in a raceway.
  - Field power interface shall be to NEMA KS 1, heavy-duty, nonfused disconnect switch. 5.
  - Provide branch power circuit to each motor and to controls with one of the following 6. disconnecting means:
    - NEMA KS 1, heavy-duty, fusible switch with rejection-type fuse clips rated for a. fuses. Select and size fuses to provide Type 2 protection according to IEC 60947-4-1.
    - NEMA KS 1, heavy-duty, nonfusible switch. b.
    - NEMA AB 1, motor-circuit protector (circuit breaker) with field-adjustable, shortc. circuit trip coordinated with motor locked-rotor amperes.
  - 7. Provide each motor with over current protection.
  - Overload relay sized according to UL 1995, or an integral component of water chiller 8. control microprocessor.
  - 9. Phase-Failure and Under voltage: Solid-state sensing with adjustable settings.
  - Transformer: Unit-mounted transformer with primary and secondary fuses and sized 10. with enough capacity to operate electrical load plus spare capacity.
    - a. Power unit-mounted controls where indicated.
  - 11. Control Relays: Auxiliary and adjustable time-delay relays.
  - Indicate the following for water chiller electrical power supply: 12.
    - Current, phase to phase, for all three phases. a.
    - b. Voltage, phase to phase and phase to neutral for all three phases.
    - Three-phase real power (kilowatts). c.
    - Three-phase reactive power (kilovolt amperes reactive). d.
    - Power factor. e.
    - f. Running log of total power versus time (kilowatt hours).
    - Fault log, with time and date of each. g.
- J. Controls:
  - 1. Stand-alone, microprocessor based.
  - 2. Enclosure: Share enclosure with electrical power devices or provide a separate enclosure of matching construction.
  - 3. Operator Interface: Multiple-character liquid-crystal display with LED backlighting for nighttime viewing, and keypad. Provide one keypad and display panel per chiller. Display module shall have a NEMA 4x housing suitable for outdoor environments. At a minimum, display the following conditions: a.
    - Date and time.

- b. Operating or alarm status.
- c. Operating hours.
- d. Outside-air temperature if required for chilled-water reset.
- e. Temperature and pressure of operating set points.
- f. Entering and leaving temperatures of chilled water.
- g. Refrigerant pressures in evaporator and condenser.
- h. Saturation temperature in evaporator and condenser.
- i. No cooling load condition.
- j. Elapsed time meter (compressor run status).
- k. Pump status.
- 1. Antirecycling timer status.
- m. Percent of maximum motor amperage.
- n. Current-limit set point.
- o. Number of compressor starts.
- 4. Control Functions:
  - a. Manual or automatic startup and shutdown time schedule.
- 5. Entering and leaving chilled-water temperatures, control set points, and motor load limit. Leaving chilled water reset control based on return water temperature, outdoor air temperature or a 4 to 20 mA input signal from the BAS.
  - a. Current limit and demand limit.
  - b. External water chiller emergency stop.
  - c. Antirecycling timer.
  - d. Automatic lead-lag switching.
  - e. Energy usage monitoring with output to the BAS.
- 6. Manual-Reset Safety Controls: The following conditions shall shut down water chiller and require manual reset:
  - a. Low evaporator pressure or high condenser pressure.
  - b. Low chilled-water temperature.
  - c. Refrigerant high pressure.
  - d. High or low oil pressure (each compressor circuit).
  - e. High oil temperature.
  - f. Loss of chilled-water flow.
  - g. Control device failure.
  - h. Loss of refrigerant charge
- 7. Edit the following two paragraphs and sub-paragraphs to ensure compatibility with the building automation system for the project. Each building should use either BACnet or LON protocol.
- 8. Building Management System Interface: Factory-installed hardware and software to enable building management system to monitor, control, and display water chiller status and alarms. Unit controller shall be compatible with standard BAS protocols.
- 9. Factory mounted DDC controller(s) shall support operation on a BACnet® or LONMARK ® network via one of the data link / physical layers listed below as specified by the successful building automation system (BAS) supplier.
  - a. BACnet MS/TP master (Clause 9)

- b. BACnet IP, (Annex J)
- c. BACnet ISO 8802-3, (Ethernet)
- d. LONMARK FTT-10A. The unit controller shall be LONMARK<sup>®</sup> certified.
- K. The information communicated between the BAS and the factory mounted unit controllers shall include the reading and writing of data to allow unit monitoring, control and alarm notification as specified in the unit sequence of operation and the unit points list. Refer to Division 23 Section "Building Automation System (BAS) - Sequence of Operation" for sequences of operation and Controls drawings.
  - 1. For chillers communicating over a LONMARK network, the corresponding LONMARK eXternal Interface File (XIF) shall be provided with the chiller submittal data.
    - a. For chillers communicating over a BACnet network, all communication from the chiller unit controller as specified in the points list shall be via standard BACnet objects. Proprietary BACnet objects shall not be allowed. BACnet communications shall conform to the BACnet protocol (ANSI/ASHRAE135-2001). A BACnet Protocol Implementation Conformance Statement (PICS) shall be provided along with the unit submittal.
- L. Insulation:
  - 1. Material: Closed-cell, flexible elastomeric, thermal insulation complying with ASTM C 534, Type I, for tubular materials and Type II, for sheet materials.
  - 2. Thickness: 3/4 inch
  - 3. Factory-applied insulation over cold surfaces of water chiller components.
    - a. Adhesive: As recommended by insulation manufacturer and applied to 100 percent of insulation contact surface. Seal seams and joints.
  - 4. Apply protective coating to exposed surfaces of insulation.
- M. Accessories:
  - 1. Factory-furnished, chilled water flow switches for field installation.
  - 2. Individual compressor suction and discharge pressure gages with shutoff valves for each refrigeration circuit.
  - 3. Factory-furnished neoprene or spring isolators for field installation.
- N. Capacities and Characteristics:
  - 1. Efficiency:
    - a. Chiller shall have a COP, NPLV and IPLV better than ASHRAE Standard 90.1 latest edition under ARI test procedures. When chillers with higher efficiencies then the Standard are scheduled on the drawings, the more efficient value shall be the minimum project requirement.
  - 2. Evaporator Configuration: Integral to chiller
  - 3. Evaporator Fouling Factor: 0.0001 sq. ft. x h x deg F/Btu
  - 4. Number of Refrigeration Circuits: Two or more.
  - 5. Controls Power Connection: Fed through integral transformer

- 6. Noise Rating: Achieve the sound level performance indicated on the equipment schedules when measured according to ARI 370.
- 2.3 SOURCE QUALITY CONTROL
  - A. Perform functional test of water chillers before shipping.
  - B. Rate sound power level according to ARI 370 procedure.

## PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine areas to receive chillers for compliance with installation tolerances and other conditions affecting chiller performance. Examine proposed route of moving chillers into place and verify that it is free of interferences. Verify piping rough-in locations. Verify branch circuit wiring suitability. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Final locations of the chillers on the Drawings are approximate, unless dimensioned. Determine exact locations before roughing-in piping and electrical work.

#### 3.2 WATER CHILLER INSTALLATION

- A. Maintain manufacturer's recommended clearances for service and maintenance.
- B. Install separate devices furnished by manufacturer.
- C. Install and anchor chillers plumb and level.
- D. Install vibration isolators according to isolator manufacturer's recommendations and as scheduled or specified.
- E. Insulate cooler, suction lines, and other surfaces where condensation might occur.
- F. Insulate suction lines and other surfaces where condensation might occur.
- G. Maintain manufacturer's recommended clearances for service and maintenance.
- H. Install piping connections, maintaining clearances for service and maintenance.
- I. Install flanged connections at chillers.
- J. Install flexible pipe connections.
- K. Install shutoff valves at chiller inlet and outlet connections.
- L. Provide additional unit trim as indicated on drawings and details.

M. Electrical Wiring: Power supply wiring to equipment is specified in Division 26. Field installed control and interlock wiring required for a complete and functioning system shall be furnished and installed under this Section. Control wiring associated with the Temperature Control System is furnished and installed under Division 23 Section "Building Automation System (BAS)."

#### 3.3 CONNECTIONS

- A. Comply with requirements in Division 23 Section "Hydronic Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to chiller to allow service and maintenance.
- C. Evaporator Connections: At a minimum connect inlet to evaporator with isolation valve, ystrainer w/ hose connection, P&T tap, manual air vent, controller-bulb well, thermometer, pressure gauge, drain connection valve, flex connector, and union or flange. At a minimum connect outlet to evaporator with isolation valve, control valve, calibrated balance valve, P&T tap, manual air vent, thermometer, controller-bulb well, pressure gauge, drain connection valve, flow switch, flex connector and union or flange. See drawings for additional requirements. Utilize a single pressure gauge with isolation valves across the evaporator inlet and outlet in lieu of individual gauges to eliminate gauge error.
- D. Refrigerant Pressure Relief Valve Connections: Extend discharge piping in accordance with City of Chicago Mechanical Code.
- E. Connect each drain connection with a union and drain pipe and extend pipe, full size of connection, to roof drain. Provide a shutoff valve at each connection if required.

#### 3.4 CLEANING

- A. Clean units internally, on completion of installation, according to manufacturer's written instructions.
- B. Clean exterior prior to transfer to Owner.

## 3.5 CONTRACTOR STARTUP AND REPORTING

- A. Engage a factory-authorized service representative to perform startup service. Fill out start-up checklists and attach copy to Contractor Startup Report
- B. Inspect field-assembled components, equipment installation, and piping and electrical connections for proper assemblies, installations, and connections.
- C. Complete installation and startup checks according to manufacturer's written instructions and perform the following:
  - 1. Verify that refrigerant charge is sufficient and water chiller has been leak tested.
  - 2. Verify that pumps are installed and functional.
  - 3. Verify that thermometers and gages are installed.
  - 4. Operate water chiller for run-in period according to manufacturer's written instructions.
  - 5. Check bearing lubrication and oil levels.

- 6. Verify proper motor rotation.
- 7. Verify vibration isolators and flexible pipe connections are properly installed and check static deflection including during startup and shutdown
- 8. Verify pressure relief piping is installed in accordance with City of Chicago Mechanical code.
- 9. Verify controls, safety interlocks and all chiller protection devices are installed and functioning properly.
- 10. Verify labels and safety instructions are clearly visible
- 11. Verify required clearances have been maintained
- 12. Test and adjust controls and safeties. Replace damaged or malfunctioning controls and equipment.
- D. Prepare a written startup report that records results of tests and inspections.
- E. Occupancy Adjustments: When requested within 12 months of date of preliminary acceptance, provide on-site assistance in adjusting system to suit actual occupied conditions. Provide up to two visits to site outside normal occupancy hours for this purpose.

#### 3.6 TRAINING AND DEMONSTRATION

- A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain chillers as specified below:
  - 1. Train Owner's maintenance personnel on procedures and schedules for starting up and shutting down, troubleshooting, servicing, and maintaining chillers. The training will occur after the startup report has been provided to the owner and the trainer will provide four Installation and Operation manuals for the use of the Owner's personnel during training.
  - 2. Review data in maintenance manuals. Refer to Division 01 Section "Contract Closeout."
  - 3. Review data in maintenance manuals. Refer to Division 01 Section "Operation and Maintenance Data." All required and recommended maintenance will be reviewed as well as operational troubleshooting. If the IOM does not include a written troubleshooting guide, one will be provided.
  - 4. Schedule training with Owner, through Architect, with at least seven days' advance notice.
  - 5. Training will occur in two (2) separate two (2) hour sessions, neither on the same day nor on a day that the chillers are started up.
- B. Demonstrate proper operation of equipment to commissioning agent or designated Owner's personnel. The scope of the demonstration shall include functional performance requirements under both local and building automation control as well as any commissioning requirements in Division 01 and 23.
- C. Video record the training sessions. The manufacturer may submit a standard training video training CD for review as an alternate to video taping of the training session. The standard video must be reviewed and accepted by the owner/commissioning authority for the alternate to be acceptable.
